Thomas Bruin, Public Works Director

Dave Sinclair, Budget Director

Citizen Members Appointed by the Board of County Supervisors

Mr. Bill Brogdeh

Mr. Todd Hewitt

## EXECUTIVE SUMMARY

This report reflects the FY 2020 first quarter performance of the County's investment management program for the quarter ended September 30, 2019. Prince William County's Principles of Sound Financial Management and Investment Policy adopted by the Board of County Supervisors require that the County's investment program meet four criteria, listed below in order of importance:

Legality - "Investment instruments shall, at a minimum, be limited to security, issuers and maturities in compliance with the Code of Virginia (1950) as amended"

Safety - "The next objective is the preservation of capital and the protection of investment principal. The County will employ mechanisms to control risks and diversify its investments regarding specific security types or individual financial institutions"

Liquidity - "The investment portfolio will remain sufficiently liquid to enable the County to meet operating requirements which might be reasonably anticipated"

Yield - "The County will maximize yield on the portfolio but will avoid unreasonable investment risk to preserve the purchasing power of the portfolio"

## Background

The target Federal Funds rate trend is a significant driver for the average yield of Prince William County's portfolio. While the Fed Funds rate is a major factor in determining the portfolio's yield, the timing of securities purchases, cash flow requirements, the general interest rate environment at the time of purchasing securities, and the securities' duration also play a part in affecting the overall portfolio yield.

The County's General Portfolio carries an asset mix that is held over a period of time based on yields available at the time of purchase. The portfolio's total return and yield changes to reflect swings in the market price of securities and to reflect the replacement, at current market prices and yields, of securities that are sold or mature.

Prince William County's investment strategy addresses the requirements of legality, safety, and liquidity by investing in a diversified portfolio with specific security types, financial institutions, and sufficient
liquidity to meet anticipated operating requirements. In addition, the County seeks to match its cash flow needs to the overall maturity structure of the portfolio in order to maximize yield.

## Current Situation

Information received since the Federal Open Market Committee (FOMC) met in July indicates that the labor market remains strong and that economic activity has been rising at a moderate rate. Job gains have been solid, on average, in recent months, and the unemployment rate has remained low. Although household spending has been rising at a strong pace, business fixed investment and exports have weakened. On a 12-month basis, overall inflation and inflation for other items other than food and energy are running below 2 percent. Survey based measures of longer-term inflation expectations are little changed. Consistent with its statutory mandate the committee seeks to foster maximum employment and price stability. In light of the implications of global developments for the economic outlook as well as muted inflation pressures, the committee decided to lower the target range for the federal funds rate to $13 / 4$ to 2 percent. As the Committee contemplates the future path of the target range for the federal funds rate, it will continue to monitor the implications of incoming information for the economic outlook and will act as appropriate to sustain the expansion.

## INVESTMENT PORTFOLIO STRUCTURE

The County's General Portfolio is comprised of all funds except certain restricted and special funds, i.e., bond proceeds, escrow, pension funds and self-insurance funds. All general fund interest income is earned from securities in the general portfolio. Bond proceeds are invested in accordance with the requirements and restrictions outlined in the bond documents as directed by the Debt Management Team and reported and provided as an attachment to this report.

## EXCEPTIONS TO INVESTMENT POLICY

In accordance with Section 60-17 of the Investment Policy, specific exceptions to the policy guidelines are to be included as part of this report. There were no exceptions to the Investment Policy during the quarter ended September 30, 2019.

## INVESTMENT PERFORMANCE

The performance data provided in this report is prepared in accordance with the County's Investment Policy reporting guidelines.

Investment performance is presented on both a total return basis, which includes the impact of adjusting investments to market value, and on an earnings yield basis. Total return is made up of two primary components. The first is the earnings/yield income component that is the result of coupon interest rates, principal value invested and the time period of ry . the investments being measured. That component of the total return is fairly stable and moves slowly as new investments are added to the portfolio or investments are removed from the portfolio as securities mature. The second component of total return is determined by the change in market value of the securities at the end of the period being measured. This portion of the total return can be volatile given changes in the economic environment, Federal Reserve Board (FRB) rate policies, and significant geo -political events. (Note: a change in market value does not affect the cash flow).

After pausing for six months, the Federal Reserves' Open Market Committee (FOMC) cut the target Federal Funds rate 25 basis points at the July and September meetings to a range of $1.75 \%$ to $2.00 \%$. Yields across the treasury curve have decreased approximately 100 basis points since December of 2018. Markets continued to price in one additional cut to occur at the October meeting. The portfolio's total return improved significantly reflecting a 213 basis point increase since this time last year. Earnings for the quarter increased 16 basis points.

|  | FY 2020/Q1 | FY 2019/Q1 | Basis Point |
| :---: | :---: | :---: | :---: |
| Earnings Yield | $2.04 \%$ | $1.88 \%$ | 16 |
|  |  |  |  |
| Total Return | $2.81 \%$ | $0.68 \%$ | 213 |
|  |  |  |  |

## PORTFOLIO COMPOSITION \& MATURITY DISTRIBUTION

Investments held by the County are diversified to control the risk of loss resulting from over-concentration of assets in a specific security or class of securities.

The charts below present the percentage of assets held on September 30, 2019, by investment type and the investment guideline limits for each type of security as well as maturity distribution by investment category.

## INVESTMENT ACTIVITY

The impact of two rate cuts during the quarter, resulted in called bonds totaling approximately $\$ 46$ million. The market also continued to present opportunities, as rates fell, to sell bonds and improve yield or duration. Funds were reinvested in callable agencies. The table below reflects the investment transactions over this quarter.

| Activity | Par Value <br> (millions) | Yield |
| :---: | :---: | :---: |
| Purchase | $\$ 43.8$ | $2.25 \%$ |
| Mature/Call | $\$ 76.6$ | $1.91 \%$ |
| Sell | $\$ 27.0$ | $2.18 \%$ |

## MATURITY LIMITATIONS

The weighted average maturity (WAM) on September 30, 2019, was 2.7 years. The average days to maturity on a callable life basis was 111 days. Portfolio duration at quarter end was 2.6 years.

## MARKET VALUE

The amortized value at quarter end was $\$ 1.140$ billion. The market value of $\$ 1.138$ billion is less than the amortized value by $\$ 1.7$ million or $0.15 \%$. The difference represents market value adjustments due to lower book prices of securities in the portfolio.

## INVESTMENT INCOME

On an total return basis, the General Portfolio recorded $\$ 8.5$ million for the quarter. On an earnings yield basis, the portfolio produced $\$ 6.2$ million.

The investment income forecast for FY 2020 is $\$ 13.94$ million. The General Fund portion of the fiscal year-to-date (FYTD) earnings is $\$ 2.9$ million which is $21 \%$ of the adopted budget.

## PERFORMANCE BENCHMARKS (QTR)

The County money market funds earnings yield, at $2.16 \%$, were less than the Virginia Local Government Investment Pool (LGIP) yield of $2.29 \%$. The County held an average of $\$ 393$ million for the quarter in this asset category. For the quarter ended September 30, 2019, the County's non-money market investments, on an earnings yield basis, were slightly lower than the ICE BAML 1-3 year UST Index by a spread of 22 points as shown in the chart below.

The County's, non-money market total return for the first quarter outperformed the benchmark by 48 basis points.

## PERFORMANCE BENCHMARKS (FYTD)

The year-to-date total return on investments for the General Portfolio was $2.81 \%$. The earnings yield, at $2.04 \%$ was 16 basis points higher from the prior year-to-date. The table below provides a comparison of the returns of various government securities and funds.

|  | FYTD |  |  |
| :--- | :--- | :--- | :--- |
|  | $\mathbf{2 0 2 0}$ | $\mathbf{F Y T D}$ | BP <br> Change |
| PWC General Portfolio |  |  |  |
| $\quad$ Total Return | $2.81 \%$ | $0.68 \%$ | $2.13 \%$ |
| $\quad$ Earnings Yield | $2.04 \%$ | $1.88 \%$ | $0.16 \%$ |
| ICE BoAML 1-3 Yr. UST |  |  |  |
| $\quad$ Total Return | $2.65 \%$ | $0.78 \%$ | $1.87 \%$ |
| $\quad$ Earnings Yield | $2.19 \%$ | $2.06 \%$ | $0.13 \%$ |
| Virginia LGIP | $2.29 \%$ | $2.14 \%$ | $0.15 \%$ |
| 90 Day U.S. Treasury Bill | $2.02 \%$ | $2.08 \%$ | $-0.06 \%$ |
| 2 Year U.S. Treasury Note | $1.69 \%$ | $2.66 \%$ | $-0.97 \%$ |

## NATIONAL ECONOMIC INTEREST RATE OUTLOOK

The economic commentary and interest rate outlook is provided by Wells Fargo Securities in their Weekly Economic \& Financial Commentary. Handouts will be available at the meeting.

## INVESTMENT STRATEGY

The County's current investment strategy properly addresses the requirements of legality, safety and liquidity by investing in a diversified portfolio with respect to specific security types, financial institutions and sufficient liquidity to meet reasonably anticipated operating requirements. The County seeks to match its cash flow needs to the maturity structure of the portfolio in order to maximize yield. The current investment strategy attempts to:
(1) Avoid the premature sale of investments to meet day-to-day operating requirements;
(2) Maintain higher balances in short-term investments when longer-term interest rates are not favorable; and
(3) Further diversify short-term investment options in order to reduce the dependence on money market funds.

The County's portfolio contains no direct investments in assetbacked commercial paper, or mortgage backed securities.

## Attachment C

## Sept. 18, 2019

Information received since the Federal Open Market Committee met in July indicates that the labor market remains strong and that economic activity has been rising at a moderate rate. Job gains have been solid, on average, in recent months, and the unemployment rate has remained low. Although household spending has been rising at a strong pace, business fixed investment and exports have weakened. On a 12 -month basis, overall inflation and inflation for items other than food and energy are running below 2 percent. Market-based measures of inflation compensation remain low; survey-based measures of longer-term inflation expectations are little changed.

Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. In light of the implications of global developments for the economic outlook as well as muted inflation pressures, the Committee decided to lower the target range for the federal funds rate to $1-3 / 4$ to 2 percent. This action supports the Committee's view that sustained expansion of economic activity, strong labor market conditions, and inflation near the Committee's symmetric 2 percent objective are the most likely outcomes, but uncertainties about this outlook remain. As the Committee contemplates the future path of the target range for the federal funds rate, it will continue to monitor the implications of incoming information for the economic outlook and will act as appropriate to sustain the expansion, with a strong labor market and inflation near its symmetric 2 percent objective.

In determining the timing and size of future adjustments to the target range for the federal funds rate, the committee will assess realized and expected economic conditions relative to its maximum employment objective and its symmetric 2 percent inflation objective. This assessment will take into account a wide range of information, including measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial and international developments.

Voting for the monetary policy action were Jerome H. Powell, Chair, John C. Williams, Vice Chair; Michelle W. Bowman; Lael Brainard; Richard H. Clarida; Charles L. Evans; and Randal K. Quarles. Voting against the action were James Bullard, who
preferred at this meeting to lower the target range for the
federal funds rate to $1-1 / 2$ to $1-3 / 4$ percent; and Esther L. George and Eric S. Rosengren, who preferred to maintain the target range at 2 percent to $2-1 / 4$ percent.

July 31, 2019

Information received since the Federal Open Market Committee met in June indicates that the labor market remains strong and that economic activity has been rising at a moderate rate. Job gains have been solid, on average, in recent months, and the unemployment rate has remained low. Although growth of household spending has picked up from earlier in the year, growth of business fixed investment has been soft. On a 12-month basis, business fixed investment has been soft. On a 12 -month basis, everall inflation and inflation for items other than food and energy are running below 2 percent. Market-based measures of longer-term inflation expectations are little changed.

Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. In light of the implications of global developments for the economic outlook as well as muted inflation pressures, the Committee decided to lower the target range for the federal funds rate to 2 to $2-1 / 4$ percent. This action supports the Committee's view that sustained expansion of economic activity, strong labor market conditions, and inflation near the Committee's symmetric 2 percent objective are the most likely outcomes, but uncertainties about this outlook remain. As the Committee contemplates the future path of the target range for the federal funds rate, it will continue to monitor the implications of incoming information for the economic outlook and will act as appropriate to sustain the expansion, with a strong labor market and inflation near its symmetric 2 percent objective.

In determining the timing and size of future adjustments to the target range for the federal funds rate, the committee will assess realized and expected economic conditions relative to its maximum employment objective and its symmetric 2 percent inflation objective. This assessment will take into account a wide range of information, including measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial and international developments.

The Committee will conclude the reduction of its aggregate securities holdings in the System Open Market Account in August, two months earlier than previously indicated.

Voting for the monetary policy action were Jerome H. Powell, Chair; John C. Williams, Vice Chair; Michelle W. Bowman; Lael Brainard; James Bullard; Richard H. Clarida; Charles L. Evans; and Randal K. Quarles. Voting against the action were Esther L. George and Eric S. Rosengren, who preferred at this meeting to maintain the target range for the federal funds rate at 2-1/4 to 2-1/2 percent.

## Definitions

ABA Transit Number - A unique number assigned by the ABA that identifies a specific federal or state chartered bank or savings institution (also referred to as ABA routing number).

Accrued Interest - The amount of interest that accumulates on a fixed-income security from one interest payment to the next.
Agency Bonds - The informal name that refers to securities issued by agencies of the United States Government and U.S. Government Sponsored Enterprises

Annual Percentage Yield - The effective annual rate of return taking into account the effect of compounding interest.
Ask - The lowest price at which a seller is willing to sell his or her securities.

## Glossary

Asset Allocation - The diversification of assets across different asset classes, such as stocks, bonds and cash, to meet goals given risk tolerance, tax status and time horizon.

Asset Class - The categorization of an asset. Examples of representative asset classes include equities, bonds, money markets and cash.
Basis Point - A unit that is equal to $1 / 100$ th of $1 \%$ and is used to denote the change in a financial instrument. One basis point on a $\$ 1,000,000$ bond is equal to $\$ 100$.

Benchmark - A standard index used for measuring the performance of an investment. The goal of most money managers and investors is to outperform their respective benchmark.

Bid - The price a broker is willing to pay for a security.
Bond - A debt instrument issued by corporations and governments in which the issuer promises to pay to the bondholder principal and interest according to the terms and conditions of the bond.

Book Entry - Most bonds are issued in book entry form, which means that there is no physical bond certificate. Bond ownership is evidenced by a trade confirmation issued by the broker/dealer, and by the monthly statements that the brokerage firm provides.

Bullet - A bond that is not able to be redeemed prior to maturity is said to be non-callable. A slang term for a non-callable bond is a "bullet". A bullet usually carries a lower interest rate since the investor is protected against the possibility of the bond being called when interest rates fall.

Call Date - The date after which a bond issuer can redeem a callable bond. The list of dates on which a specified bond can be called is a call schedule.

Call Protection - A period of time during which a bond issuer cannot call, or buy back, a bond. For example, if the first call on a bond is in 3 years from now, a buyer will have 3 years of call protection, and they are assured that they can own the bond for at least 3 years.

Call Risk - Risk to a bond holder that a bond may be redeemed before scheduled maturity. The main risk of having a bond called before maturity is that the investor will be unable to replace the bond's yield with another similar quality bond paying the same yield.

Callable Bond - A callable bond can be redeemed by the issuer before it matures if that provision is included in the terms of the bond agreement. Bonds are typically called when interest rates fall, since issuers can save money by paying off existing debt and offering new bonds at lower rates.

## Glossary

Certificate of Deposit - A deposit of funds, in a bank or savings and loan association, for a specified term that earns interest at a specified rate or rate formula.

Commercial Paper - Commercial paper consists of unsecured, short-term promissory notes issued by companies or commercial bank holdings.
CP maturities are generally limited to a maximum of 270 days.
Corporate Bond - The debt of corporations. The bonds are fully taxable, and issued in maturities ranging from less than one year up to 30 years.
Covered Bonds - A corporate bond with one important enhancement: Recourse to a pool of assets that secures or "covers" the bond if the originator (usually a financial institution) becomes insolvent. This enhancement typically (although not always) results in the bonds being assigned AAA credit ratings.

For the investor, one major advantage to a covered bond is that the debt and the underlying asset pool remain on the issuer's financials, and issuers must ensure that the pool consistently backs the covered bond. In the event of default, the investor has recourse to both the pool and the issuer. Another advantage is that the interest is paid from an identifiable source of projected cash flow versus out of other financing operations.

Coupon - Interest rate on a debt security the issuer promises to pay to the holder until maturity.

Credit Ratings - A financial indicator to potential investors used to assess the credit worthiness of a bond issuer. NRSROs are agencies that study the financial strength of bond issuers, and assign credit ratings. The three major NRSROs are Moody's Investors Service, Inc., Standard \& Poor's Inc. and Fitch Ratings.

Current Yield - The rate of return an investor will get, without taking into account the value of the premium or discount of the purchase price. It is calculated by dividing the coupon by the price. The current yield is not a good indication of your return on investment. Yield to maturity and yield to call take into account the value of the discount or premium paid for the bond, and as such they offer a much better indication of the value of the bond.

CUSIP - A CUSIP number identifies a company or issuer and the type of security.
Dated Date - The date a bond is issued and starts to accrue interest.
Default Risk - The event in which companies will be unable to make the required payments on their debt obligations. Default risk is a component in virtually all forms of credit extensions. To mitigate the impact of default risk, lenders often charge rates of return that correspond to the debtor's level of default risk.

## Glossary

Delivery vs. Payment - The simultaneous exchange of securities and cash. The safest method of settling either the purchase or sale of a security.
Discount - The amount by which the price for a security is less than its par.
Diversification - The investment of funds in several different asset classes and a variety of securities within each class to help reduce the impact of volatility in a portfolio and assist in managing risk.

DK - "don't know". A security is said to be 'DK'd" when it is delivered to the purchaser or more typically the purchaser's correspondent but is rejected because the purchaser either doesn't know or doesn't agree with one or more of the aspects of the trade.

Duration - A measure of the average timing of cash flows from an asset or a liability or from an asset portfolio or a liability portfolio. Essentially, duration is a more accurate measure of maturity because it reflects the timing of cash flows from period interest and/or principal payments in addition to the cash flows represented by the funds transferred at maturity. Duration is computed by summing the present values of all of the future cash flows after multiplying each by the time until receipt, and then dividing that product by the sum of the present value of the future cash flows without weighting them for the time of receipt.

Earnings Yield - The result of coupon interest rates, principal value invested and the time period of investments being measured.
Extraordinary Redemption - Some municipal bonds are issued with an extraordinary redemption provision which gives the issuer the right to call the bonds under certain circumstances. The circumstances could range from natural disasters to cancelled projects to almost anything else.

General Obligation Bonds - Municipal bond backed by the full faith and credit of a municipality. A GO bond is repaid with general revenue and borrowings.

Government Obligations - Bonds, notes and other evidences of indebtedness of the: U.S. Government or agency thereof, Commonwealth of Virginia, and Virginia political subdivisions. The principal and interest of which are unconditionally guaranteed. Such securities will include, but not be limited to: U.S. Treasury Bills, Notes and Bonds, State and Local Government Securities (SLGS), Government National Mortgage Association (GNMA), Small Business Administration (SBA), Federal Housing Administration (FHA), Farmers Home Administration (FHMA), General Services Administration (GSA) and Export-Import Bank.

Government Sponsored Enterprises (GSEs) - U.S. Government sponsored corporations which carry the implicit backing of the U.S.
Government, but are not direct obligations of the U.S. Government. For this reason, these securities will offer a yield premium over Treasuries. Examples of GSEs include: Federal National Mortgage Association (FNMA), Federal Farm Credit Bank (FFCB), Federal Home Loan Bank or its District Banks (FHLB) and Federal Home Loan Mortgage Corporation (FHLMC).

## Glossary

High Yield Bonds - A bond that has a rating of BB or lower and that pays a higher yield to compensate for its greater risk. Also known as noninvestment grade, speculative-grade, or junk bonds

Interest Rate - Rate of interest charged for the use of money, usually expressed at an annual rate.
Interest Payment Dates - Most bonds pay interest semi-annually (twice per year). The interest payment dates are usually the same month and day as the maturity date of the bond, and the six month anniversary.

Investment Grade - A rating that indicates that a municipal or corporate bond has a relatively low risk of default. Bonds that are rated at or above 'Baa' by Moody's or 'BBB' by S\&P are said to be investment grade bonds

Issuer - A legal entity that develops, registers and sells securities for the purpose of financing its operations. The issuer is a company in the case of a corporate bond, or a state, city, or county in the case of a municipal bond. The U.S. government is the issuer of Treasury bonds.

Laddered Bond Portfolio - A portfolio in which asset classes and investment maturities are staggered, in order to receive regular income and to smooth-out the effect of interest rate fluctuations. This also enables the investor to diversify in terms of default risk and reinvestment risk.

Liquidity - The ability to rapidly buy or sell an asset without substantially affecting the asset's price.
Liquidity Risk - The ability to easily convert securities to cash and is determined by how active the secondary market is for a particular security.

Market Risk - The possibility for an investor to experience losses due to factors that affect the overall performance of the financial markets. Market risk, also called "systemic risk", cannot be eliminated through diversification, though it can be hedged against.

Mark to Market - When an investment is marked to the market, its value is adjusted to reflect the current market price.
Maturity Date - The date at which a debt instrument is due and payable.
Municipal Bonds - Bonds that are issued by state, county, or city governments to finance general governmental activities or special projects. They are generally exempt from federal tax, and are generally state tax-free for residents of the state in which they are issued.

Par Value - The face value, or named value, of a stock or bond. With bonds, par value, is the amount you pay to purchase at issue and the amount you receive when the bond is redeemed at maturity. Par is also the basis on which the interest you earn on a bond is figured.

Premium - Amount by which a bond sells above its face (par) value.

Principal - Basic amount invested, exclusive of earnings
Realized Gain - The amount by which the sale price of an asset exceeds its purchase price.
Rebalancing - The systematic practice of restoring your portfolio to its intended asset allocation
Repurchase Agreement - A form of secured, short-term borrowing in which a security is sold with a simultaneous agreement to buy it back from the purchaser at a future date. Rates paid on repos are short-term money market interest rates and are completely unrelated to the coupon rate paid on the instrument being purchased.

Revenue Bonds - The interest and principal payments for municipal bonds are typically either guaranteed by the issuer or by the revenue from a specific project. If they are guaranteed by a specific project, the bondholder is relying on revenue from the project to pay principal and interest, and the bonds are known as revenue bonds.

Reverse Repurchase Agreement - The mirror image of a REPO. In a reverse REPO, an investor (governmental entity) owns securities, such as a Treasury note, U.S. government agency bond or other security, that a bank or dealer purchases under an agreement and sells back to an investor on a specified date, at an agreed-upon interest rate.

Secondary Market - A market where investors purchase securities or assets from other investors, rather than from issuing companies themselves.
Settlement Date - Date by which an executed order must be settled, either by a buyer paying for the securities with cash or by a seller delivering the securities and receiving the proceeds of the sale for them.

SNAP - The Treasury Board, an agency of the Commonwealth of Virginia, is responsible for implementing and supervising SNAP, which provides assistance to local governments in the investment of bond proceeds and the preparation of rebate calculations in compliance with treasury arbitrage rebate calculations.

Spread - The difference between the yield of the bond and the yield of a Treasury bond with a comparable maturity. Since the Treasury yield is considered risk-free, the spread reflects the risk premium of the bond.

Step-Up Bond - A bond that pays an initial coupon rate for the first period, and then a higher coupon rate for the following periods.
STRIPS - Separate trading of registered interest and principal of securities.

## Glossary

Taxable Equivalent Yield - Pretax yield that a taxable bond would have to pay to equal the tax-free yield of a municipal bond in an investor's tax bracket.

Total Return - The return on investment, including income from dividends and interest, as well as appreciation or depreciation in the price of the security, over a given time period.

Trade Date - Day on which a security trade actually takes place.
Treasury Bills - Securities issued by the U.S. Government in 3 month, 6 month and 1 year maturities, and they are sold at a discount to par. The bonds do not pay period interest, and the return an investor receives is based on the amount that the purchase price is discounted from par.

Treasury Bonds and Notes - Securities issued by the U.S. Government in maturities of two, five, ten and 30 years. They all pay interest semiannually. The issues that mature in ten years or less are called notes, and the 30 year issue is called a bond. The 30 year US Treasury bond is also know as the 'long bond'

Treasury Inflation Protection Securities (TIPS) - Bonds issued by the U.S. Treasury that hedge the purchaser against the impact of inflation by semi-annually increasing the par value of the issue by the amount of inflation. These securities represent a real, inflation-adjusted yield. Because of this the coupon on TIPS is significantly lower than a non-TIP security.

Treasury STRIPS - These zero-coupon bonds come about when the bond's coupons are separated from the bond or note; an investor's return is determined by the difference between the purchase price and the bond's trading value, or face value if held to maturity. Treasury STRIPS are a direct obligation of the U.S. Treasury.

Variable/Floating- Rate Securities - Variable- or floating-rate debt may include corporate, municipal, or asset-backed securities and also senior bank loans. They can be linked to nearly any type of benchmark and pay interest based on a wide range of formulas. The most basic type pays a coupon equal to some widely followed interest rate, such as the one- or three-month LIBOR (London Interbank Offered Rate), plus a fixed spread above that rate.

Yield to Call - The calculated yield based on price paid, coupon rate and amount of time until first call date. The yield is based on the security being called and not maturing and will fluctuate with market price.

Yield Curve - A curve that shows the relationship between the yields on short-term and long-term bonds of the same investment quality.
Yield to Maturity - The calculated return on investment that an investor will get if they hold the bond to maturity. It takes into account the present value of all future cash flows, as well as any premium or discount to par that the investor pays.

Yield to Worst - The return if the worst possible bond repayment takes place, or the lowest potential yield that can be received on a bond without the issuer actually defaulting

Zero Coupon Bonds - Bonds that do not pay interest during the life of the bond. They are bought at a discount to the maturity value. For example, a zero coupon bond is bought at $\$ 700$ today to get back $\$ 1,000$ in 5 years. The difference between the purchase amount and the future amount received is the return. Zero Coupon Bonds are similar to savings bonds.
